

Sprint	Features
1	1). A feature that launches Quax and shows an empty board. (SR1) 2). A feature that displays the correct game title based on the selected mode (Human V Human or Human V Bot). (SR1.1) 3). A feature that displays the Quax board in the correct 11×11 layout with octagonal and rhombic cells. (SR1.2, SR1.3) 4). A feature that labels the board correctly using A–K for BLACK and 1–11 for WHITE. (SR1.4, SR1.5) 5). A feature that shows the “BLACK to play” indicator with the correct piece icons (octagonal + rhombic). (SR2, SR2.1)
2	1). A feature that lets the current player place an octagonal stone on any unoccupied octagonal cell. (SR5.1, SR5.2) 2). A feature that lets the current player place a rhombic tile on any unoccupied rhombic cell. (SR5.1, SR5.2) 3). A feature that prevents placing a piece on an occupied cell and gives clear feedback to the user. (SR5.1, SR5.2) 4). A feature that switches turns after a valid move and updates the “to play” indicator to the correct player. (SR2.2)
3	1). A feature that shows a Pie Rule button for WHITE after BLACK’s first move. (SR3, SR3.1) 2). A feature that swaps player colours when the Pie Rule is used. (SR3.2) 3). A feature that makes the Pie Rule button disappear after it is used (so it can’t be used again). (SR4.1) 4). A feature that updates the “to play” indicator correctly after the Pie Rule swap. (SR4.2)
4	1). A feature that detects when BLACK forms a connected chain from top to bottom and displays “BLACK wins.” (SR6) 2). A feature that detects when WHITE forms a connected chain from left to right and displays “WHITE wins.” (SR7) 3). A feature that supports Human V Bot mode where the bot automatically makes a valid move on its turn. (SR8.1) 4). A feature that provides a “Show Strategy” option for testing, which displays a visual explanation of the bot’s chosen strategy. (SR8.2, SR8.3) 5). A feature that provides a “Hide Strategy” option for testing, which turns off the strategy display. (SR8.4)
