

QuaxBoard - Sprint 4

How to launch and play

Prerequisites

- Java 21
- Maven installed and available as mvn in the terminal.
- JavaFX SDK installed

Launch instructions (recommended)

In your terminal, navigate to the folder containing the JAR file, and run the command:

```
java -jar 1QuaxBoard-1.0-SNAPSHOT.jar
```

The Quax Board app window should open.

How to use the Sprint 4 app

- **Win indicator:** Once Black or White wins the game by connecting a chain from top to bottom (Black) or left to right (White), the game ends and the winner is displayed at the top of the screen.
- **Bot mode:** Once a human places a piece, the bot will automatically place a piece based on a strategy (starting piece, extending the longest chain, winning if possible, blocking human's win or disrupting human's chain)
- **Strategy button:** When the "Show strategy" button is clicked, the piece where the bot will place next is highlighted. When the "Hide strategy" button is clicked, the highlighted piece disappears.
