

Quax board - Sprint 2

Features we added (Sprint 2 Roadmap):

- **SR5.1/5.2:** Allow the current player to place a piece on any unoccupied octagonal cell on the board
- **SR5.1/5.2:** Allow the current player to place a piece on any unoccupied rhombus cell on the board
- **SR2.2:** After a valid move the players switch turns and the turn indicator updates to the correct player

Testing we added (at least one per feature)

Feature	Test case
SR5.1 / SR5.2	Placing an octagon on an empty cell succeeds and assigns the correct player to that cell.
SR5.1 / SR5.2	Placing a rhombus on an empty cell succeeds and assigns the correct player to that cell.
SR5.1 / SR5.2	Attempting to place a piece on an already occupied cell fails and the board state does not change.
SR5.1 / SR5.2	Out-of-bounds moves are rejected for both octagon and rhombus cells.
SR2.2	After a successful move, the current player switches to the other player.

Deviations / Notes

- As specified in sprint 1 submission feedback, we did not include “A feature that prevents placing a piece on an occupied cell and gives clear feedback to the user.”
- Move validation and the current game state were separated into game logic classes, ensuring all code is not in one file.
- Added JAR file.
