

Quax board - Sprint 3

Features we added (Sprint 3 Roadmap):

- **SR3 / SR3.1:** Show a Pie Rule button for WHITE after BLACK's first move
- **SR3.2:** Swap player colours when the Pie Rule is used
- **SR4.1:** Make the Pie Rule button disappear after it is used so it cannot be used again
- **SR4.2:** Update the "to play" indicator correctly after the Pie Rule swap

Testing we added (at least one per feature)

Feature	Test case
SR3 / SR3.1	After BLACK's first move, the Pie Rule button becomes visible for WHITE.
SR3.2	Using the Pie Rule swaps the player colours so Player 1 becomes WHITE and Player 2 becomes BLACK.
SR4.1	After the Pie Rule is used, the Pie Rule button disappears and cannot be used again.
SR4.2	After the Pie Rule is used, the turn indicator updates to show "WHITE (Player 1) to play."

Deviations / Notes

- Sprint 3 testing was split between game logic tests and UI tests, since button visibility and turn-label updates are UI behaviours.
- The Pie Rule swaps player-colour ownership only; pieces already on the board keep their original colours.
- The current turn indicator shows both the colour and the player number, for example "WHITE (Player 1) to play."
- Code was cleaned up according to lecture notes – e.g. taking out unnecessary comments, making functions shorter, etc.
